

PRODUCT ASSEMBLY INSTRUCTIONS:

CONDENSATION COLLECTOR

The following instructions apply to the assembly and maintenance of the condensation collector.

Condensation collector
Diameter:

- 5 inch
- 6 inch

USE:

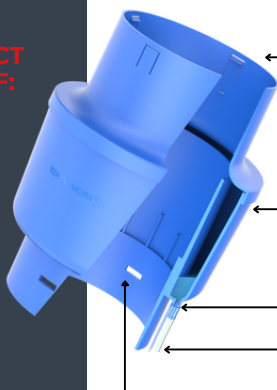

The condensation collector is a supplementary accessory of the roof vent and is used to capture the condensation from the space between the vent and the attic. The use of the condensation collector is to minimize the risk of condensation returning to the ventilation system and fan.

This product is compatible with all Roofivent vents and Iflex pipes – 5 inch or 6 inch.

THE SET CONTAINS

Condensation collector with the discharge hose 3 ft long.

THE PRODUCT CONSISTS OF:

1 - Upper click for connection to vent inlet pipe

2 - Condensation reservoir

3 - Condensation discharge point

4 - Condensation discharge hose

5 - Bottom click for connection to flex pipe

ASSEMBLY INSTRUCTIONS:

1. Always install the condensation collector with the condensation discharge point down.
2. Connect the product to the vent inlet pipe with the upper click (1) after vent is completely installed.
3. The bottom of the product is connected to the Iflex pipe (5)
4. The end of condensation discharge hose is placed to a container (not part of this product) into which the condensation can drain. This container needs to be accesible so that can be checked regularly and emptied when needed.
